1. Twelve services have no follow-up questions: SOD, Patio Covers, Concrete, Retaining Walls, Planter Walls, Pavers, Bar & Bbq, Fire Pits, Decomposite Granite, Decorative Rock, Irrigation, and Planting. Is a checkbox enough, with the rest collected on site? **I will be adding questions later, please start with artificial grass, all these will have follow up questions i just haven't had time to finish. I am working on products for artificial grass so you can connect that part of the form first**
2. On Artificial Grass, can a customer choose more than one install type (for example Budget Friendly and Playground), or only one? **Depending if there is more than one area, for example it might be one type of installation in the front yard and another type in the back yard, it is not common but can be possible, maybe if they do select more than one ask to specify which area each installation type belongs to.**
3. Same question for Putting Green, Underground, Demo, and Low Voltage Lighting. **For putting green only one type of installation. For underground, Demo, Low Voltage Lighting they can select more than one.**
4. Can a customer select more than one add-on? The form does not ask for a quantity. Should quantity be entered on site? **Yes they can select more than one add-on and ask if they know quantity and give option to add it, for areas of turf and quantity do not make it mandatory as some clients wont know this info, just give option to add it and provide an auto calculator so it's more easy for them.**
5. For Artificial Grass Replacement, the customer does not pick a turf product, and the form says the turf price is separate. Which Jobber line is the removal, and how should the turf itself get onto the quote? **Add a follow up question asking for turf but needs to go back to asking installation, area, add ons etc. So this will add the replacement price plus the turf product**
6. The requirements say the product can depend on customer type. The form does not ask for that. Do you want it added? If yes, what are the choices, and which items in Jobber change? **Add at the beginning in contact information a question saying if they are looking for a service for their home or if they're a contractor. For products I am adding "RP" at the beginning of product name for homeowners as its a retail price and will add "CP" for contractor pricing, depending on what they answer at first then it will narrow down the products. You can set it by default to homeowner as most will be homeowners.**
7. Who on your team reviews the draft, and who sends it to the customer? **The office views request and first form in jobber and Sales goes onsite and fills the second form.**
8. For each choice on the form, tell us two things: which item in Jobber should go on the quote, and how to measure it (square feet, linear feet, or a count). Include turf, demo, underground, lighting, and add-ons. For example: Players Choice goes on the quote as the Players Choice item in Jobber, measured in square feet. Prices stay in Jobber. **I am working on this. You would need the complete product list and I will guide you because there are over 500 outcomes. For example product "9.01 RP - AG Budget Friendly Install - Players**

Choice [299 SF & UNDER]" is the answer to following questions: Customer type: Homeowner + Install type: Budget Friendly Installation + Turf Product: Players Choice + Area: 299 SF & UNDER. All answers will depend on a combination of answers using this same concept.

9. Please send Jobber API access for the account that holds your product catalogue, with permission to look up customers and create draft quotes. **Done**
10. Please send photos for every turf product the form says to show with a picture. **We will work on this after setting up products in jobber**
